

Image Album Backend Code

Assignment

Create a photo album backend using express.js.

React.js frontend for this assignment:

<https://github.com/alex-solovev/investax-album>

Empty backend repository for this assignment:

<https://github.com/alex-solovev/album-backend>

Postman API documentation:

<https://documenter.getpostman.com/view/10417219/Szzkcctu?version=latest>

Notes:

- Standard.js is not required but preferred.
- Use Port Number 8888.
- Use the [existing empty backend repository](#) as starting point. Use exiting “album” directory, allow uploads to this directory or its children only. Capitalize folder names for display purpose only. **E.g. travel --> Travel**
- Read the [Postman API documentation](#). Create the backend exactly according the endpoints described in the documentation. Pay special attention to “**Example Response Object**” which is the response you should send and “**Body**” which is the payload that you will receive from frontend. Please note that it’s easier for you to download Postman app on your computer and click on the link which says “Run in Postman” and then use Postman to test your code as you make progress.
- Run the React.js frontend which is provided above. It will automatically connect to <http://localhost:8888>. Make adjustments to your backend code to ensure the frontend app works correctly.
- Ensure that you validate the payloads.
